Writing technical documentation - tutorial with Confluence

Video

https://youtu.be/d6Cs11AZqV4?si=PoqbEhEBKZwgUnJr

Notes

- Good documentation should be easy to understand and not complicated for someone to pick up and understand

- Start by outlining the topics and document structure

- Think about who will be reading it

  - Think about the language you are using (complicated words that non-technical people will not know)

- Use diagrams, videos, images, etc

  - More interesting

  - Can make certain things easier to understand

- Use examples

  - Example uses of a command

- Backup your documentation

- Learning enterprise tools (like Confluence and Jira) will help your employability
